

Group 2: IMLeagues Replacement

Weston Jones (jonesw3@rpi.edu)

Daniel Schnoll (schnod@rpi.edu)

Mark Robinson (robinm8@rpi.edu)

Jennifer Lee (leej50@rpi.edu)

Below is the initial project schedule that we had formulated for our project proposal.

	Wes	Dan	Mark	Jenny	Adam	Everyone
9/18						First Draft proposal Submitted
10/5						Revised proposal submitted
10/22						Website wireframe & design finalized
10/26	Front end component of view X page completed	Front end component of main page completed		Front end component of “Add X” page completed		
10/29		Database teams, players, and matches tables setup and populated with test data				
11/2	Built in back end functionality to pull data from database.			Build in back end functionality to add data to database		
11/5		Front end design for admin login page finished	Database admin tables setup and populated with test data			
11/12	Adjust view page to display admin privileges	Finish login page backend to successfully validate credentials	Adjust main page to display admin privileges	Adjust add page to display admin privileges and authorize data entry		
11/15 to 11/19						Integration testing

11/26		Final tweaks and fixes
11/29		Practice demoing site
11/30		Final presentation

Everything is proceeding according to the plan so far in that we've deliberated and decided on a final look of the website through discussion and quick sketches.

We thought it would be best to nail down exactly what we would be working on first, since it's much easier to collaborate as a group on something when we've all got a clear idea of the end goal.

With that in mind, each of the individual teams that make up our group are making good progress towards their end goals. Weston is working on the HTML and general look of the view page, Mark and Dan are working on the look of the main page, and Jennifer and Adam are working on the look of the Add page. By next class we expect to have the html for these designs done.

We'll demo our designs to one another, then verify that they are consistent with the agreed upon look of the website, and then move on with the next set of tasks. These next tasks will mostly be dealing with the backend components of the website. We tried to structure the assignments such that each team / person would stick to working with one particular page of the site, figuring that they'd be most familiar with the intricacies of a give page that way.

In conclusion, we're making good progress with the site and will ask if we have any questions and concerns.
