## Analysis of Risk

### Question #1 of 126

A bond portfolio consists of a AAA bond, a AA bond, and an A bond. The prices of the bonds are \$1,050, \$1,000, and \$950 respectively. The durations are 8, 6, and 4 respectively. What is the duration of the portfolio?

- A) 6.00.**
- B) 6.07.**
- C) 6.67.**

#### Explanation

The duration of a bond portfolio is the weighted average of the durations of the bonds in the portfolio, weighted by the value of each bond divided by the value of the portfolio:

$$\text{portfolio duration} = 8 \times (1050 / 3000) + 6 \times (1000 / 3000) + 4 \times (950 / 3000) = 2.8 + 2 + 1.27 = 6.07.$$

Chapter 6 - Bond Valuation

Life Stories of Recent MBAs

Mechanical Dryin Equipment Final

A restricted payment covenant protects lenders by limiting the amount of cash that may be paid to eq *subsidiaries*'cash flows are used to service the debt of the parent or holding company and make a pa pari passu with the subsidiary's debt. A *change of control put* protects lenders by requiring the borrow the event of an acquisition.

### Question #3 of 126

Tony Horn, CFA, is evaluating two bonds. The first bond, issued by Kano Corp., pays a 7.5% annual coupon and matures in ten years. The second bond, issued by Samuel Corp., pays a 7.0% annual coupon and is priced to yield 8.0% to ten years. If Horn can reinvest the annual coupon payments from either bond at 7.5%, and holds both bonds until maturity, what will the total return will be:

- ✓ **A) greater than 7.0% on the Kano bonds and less than 8.0% on the Samuel bonds.**
- ✗ **B) less than 7.0% on the Kano bonds and less than 8.0% on the Samuel bonds.**
- ✗ **C) greater than 7.0% on the Kano bonds and greater than 8.0% on the Samuel bonds.**

#### Explanation

The yield to maturity calculation assumes that all interim cash flows are reinvested at the yield to mat

## Question #4 of 126

Jequa is a Japanese company with the following selected financial information:

¥ billions	<u>Year 1</u>	<u>Year 2</u>	<u>Year 3</u>
Operating income	262	361	503
Depreciation & amortization	201	212	256
Capital expenditures	78	97	140
Cash flow from operations	303	466	361
Total debt	2,590	2,717	2,650
Dividends	70	70	72

Jequa's three-year average free cash flow-to-debt ratio on an after-dividend basis is *closest to*:

- A) 10.2%.
- B) 7.5%.
- C) 6.0%.

### Explanation

Free cash flow = cash flow from operations - capital expenditures – dividends

Year 1:  $303 - 78 - 70 = ¥155$  billion

Year 2:  $466 - 97 - 70 = ¥299$  billion

Year 3:  $361 - 140 - 72 = ¥149$  billion

FCF/Debt:

Chapter 6 - Bond Valuation

Life Stories of Recent MBAs

Mechanical Dryin Equipment Final

✓ A) 5.37.

X B) 5.48.

X C) 5.50.

Explanation

Approximate modified duration is computed as follows:

$$\text{Duration} = \frac{105.50 - 100}{2 \times 102.50 \times 0.005} = 5.37$$

$$2 \times 102.50 \times 0.005$$

**Question #6 of 126**

The price of a bond is equal to \$101.76 if the term structure of interest rates is flat at 5%. The follow up and down shifts of the term structure of interest rates. Using the following information what is the bond?

Bond price: \$98.46 if term structure of interest rates is flat at 6%

Bond price: \$105.56 if term structure of interest rates is flat at 4%

## Question #7 of 126

Which of the following bonds has the *highest* interest rate sensitivity? A:

- A) ten year, option-free 6% coupon bond.**
- B) ten year, option-free 4% coupon bond.**
- C) five year, 5% coupon bond callable in one year.**

### Explanation

If two bonds are identical in all respects except their term to maturity, the longer term bond will be more sensitive to interest rates. All else the same, if a bond has a lower coupon rate when compared with another, it will be less sensitive to interest rate changes. Therefore, for the option-free bonds, the 10 year 4% coupon bond is the longest term and has the lowest coupon rate, making it the most sensitive to interest rate changes. The call feature does not make a bond more sensitive to changes in interest rates, because it places a ceiling on the bond's price. If interest rates decrease enough, investors will be willing to pay. If interest rates increase enough, the bonds will be called.

## Question #8 of 126

A bond's yield to maturity decreases from 8% to 7% and its price increases by 6%, from \$675.00 to \$700.00. The bond's duration is *closest to*:

- A) 7.0.**
- B) 5.0.**

Tutorial 02 (Questions &amp;...)

Chapter 6 - Bond Valuation

Life Stories of Recent MBAs

Mechanical Dryin Equipment Final

## Question #9 of 126

Jayce Arnold, a CFA candidate, considers a \$1,000 face value, option-free bond issued at par. Which about the bond's dollar price behavior is *most likely* accurate when yields rise and fall by 200 basis p will:

- A) increase by \$149, price will decrease by \$124.
- B) decrease by \$124, price will increase by \$149.
- C) decrease by \$149, price will increase by \$124.

### Explanation

As yields increase, bond prices fall, the price curve gets flatter, and changes in yield have a smaller effect. As yields decrease, bond prices rise, the price curve gets steeper, and changes in yield have a larger effect. The price increase when interest rates decline must be greater than the price decrease when interest rates rise (by the same basis point change). Remember that this applies to percentage changes as well.

## Question #10 of 126

A 30-year semi-annual coupon bond issued today with market rates at 6.75% pays a 6.75% coupon. If the market yield falls by 30 basis points, the price increases to \$1,039.59. If the market yield rises by 30 basis points, the price decreases to \$960.41. Which of the following choices is *closest* to the approximate percentage change in price for a 100 basis point change in the market interest rate?

- A) 12.80%.

Chapter 6 - Bond Valuation

Life Stories of Recent MBAs

Mechanical Dryin Equipment Final

## Question #11 of 126

Effective duration is more appropriate than modified duration as a measure of a bond's price sensitivity because:

- ✓ A) the bond contains embedded options.
- ✗ B) yield curve changes are not parallel.
- ✗ C) the bond has a low coupon rate and a long maturity.

### Explanation

Effective duration takes into consideration embedded options in the bond. Modified duration does not consider embedded options. For option-free bonds, modified duration will be similar to effective duration. Both measures are based on the value impact of a parallel shift in a flat yield curve.

## Question #12 of 126

The "four Cs" of credit analysis include:

- ✓ A) capacity and character.
- ✗ B) circumstances and covenants

 A) coupon rate. B) yield to maturity at the time of the investment. C) prevailing yield to maturity at the time interest payments are received.Explanation

The reinvestment assumption states that reinvestment must occur at the YTM in order for an investor to receive the full yield. This assumption also states that payments are received in a prompt and timely fashion resulting in immediate funds.

**Question #14 of 126**

A bond with a yield to maturity of 8.0% is priced at 96.00. If its yield increases to 8.3% its price will decrease to 7.7% its price will increase to 98.47. The modified duration of the bond is *closest to*:

 A) 2.75. B) 7.66. C) 4.34.Explanation

The change in the yield is 30 basis points.

Approximate modified duration =  $(98.47 - 94.06) / (2 \times 96.00 \times 0.003) = 7.6563$ .

Chapter 6 - Bond Valuation

Life Stories of Recent MBAs

Mechanical Dryin Equipment Final

✓ A) 6.8.

X B) 6.5.

X C) 3.1.

### Explanation

The formula for calculating the effective duration of a bond is:

where:

$V_-$  = bond value if the yield decreases by  $\Delta y$

$V_+$  = bond value if the yield increases by  $\Delta y$

-  $V_0$  = initial bond price

The effective duration of this bond is calculated as:

### Question #16 of 126

Negative convexity is *most likely* to be observed in:

✓ A) callable bonds.

X B) zero-coupon bonds

Chapter 6 - Bond Valuation

Life Stories of Recent MBAs

Mechanical Dryin Equipment Final

- X A) the product of a bond's value and its duration.
- X B) an estimate of the curvature of the price-yield relationship for a small change in yield.
  
- ✓ C) the change in the price of the bond when its yield changes by 0.01%.

#### Explanation

PVBP represents the change in the price of the bond when its yield changes by one basis point, or  $0.0001 \times \text{bond value}$ . This calculation ignores convexity because for a small change in yield, the curved relationship typically has no material effect on the PVBP.

### Question #18 of 126

For large changes in yield, which of the following statements about using duration to estimate price change is true?

- X A) overestimates the increase in price for increases in yield.
- ✓ B) underestimates the increase in price for decreases in yield.
- X C) overestimates the increase in price for decreases in yield.

Mechanical Dryin Equipment Final

Securities experienced the largest change in value in the last year.

- A) zero-coupon bond.
- X B) floating rate bond.
- X C) coupon bond with a coupon rate of 5%.

#### Explanation

The duration of a zero-coupon bond is equal to its time to maturity since the only cash flows made is maturity of the bond. Therefore, it has the highest interest rate sensitivity among the four securities.

A floating rate bond is incorrect because the duration, which is the interest rate sensitivity, is equal to coupon is paid. So this bond has a very low interest rate sensitivity.

A coupon bond with a coupon rate of 5% is incorrect because the duration of a coupon paying bond is bond since cash flows are made before maturity of the bond. Therefore, its interest rate sensitivity is I

## Question #20 of 126

The factors that must be considered when estimating the credit risk of a bond include:

- X A) the bond rating, the recovery rate, and the yield volatility.

Chapter 6 - Bond Valuation

Life Stories of Recent MBAs

Mechanical Dryin Equipment Final

- A) strong.
- B) stable.
- C) weak.

#### Explanation

Conditions that cause equity markets to weaken, such as poor economic growth, also tend to widen yield spreads in the market. Likewise, strong equity market performance tends to coincide with narrowing yield spreads. Yield spreads narrow when equity markets are stable because investors "reaching for yield" increase their demand for bonds.

### Question #22 of 126

Which of the following statements about an embedded call feature in a bond is *least* accurate? The call feature:

- A) increases the bond's duration, increasing price risk.
- B) exposes investors to additional reinvestment rate risk.
- C) reduces the bond's capital appreciation potential.

#### Explanation

A call provision *decreases* the bond's duration because a call provision introduces prepayment risk that should be taken into account in the duration calculation.

For the investor, one of the most significant risks of callable (or prepayable) bonds is that they can be called/retired before maturity. Because bonds are nearly always called for prepayment after interest rates have decreased significantly, the investor may find it nearly impossible to find comparable investment vehicles. Thus, investors have to replace their high-yielding bonds with lower-yielding issues. From the bondholder's perspective, a called bond means not only a disruption in cash flow but also a sharply reduced rate of return.

Generally speaking, the following conditions apply to callable bonds:

## Question #23 of 126

Which of the following is the most appropriate strategy for a fixed income portfolio manager under the anticipation of an expansion?

- A) Sell lower-rated corporate bonds and buy higher-rated corporate bonds.**
- B) Purchase corporate bonds and sell Treasury bonds.**
- C) Sell corporate bonds and purchase Treasury bonds.**

### Explanation

During periods of economic expansion corporate yield spreads generally narrow, reflecting decreased credit risk. If yields fall, the prices of corporate bonds increase relative to the prices of Treasuries. Selling lower-rated bonds and buying higher-rated bonds is an appropriate strategy if an economic contraction is anticipated.

## Question #24 of 126

Bond X and Bond Y have the same par value, coupon, maturity, and credit rating, but Bond X trades at a higher price than Bond Y. A possible reason for this difference is that:

- A) Bond X has a higher expected loss in a default.**

When calculating credit ratios, an analyst should increase a company's reported total debt if the company has:

- A) a debt guarantee from a parent or third party.**
- B) operating lease obligations.**
- C) a net pension asset on its balance sheet.**

#### Explanation

Credit analysts should add to a company's total debt its obligations such as operating lease payments and underfunded pension plans. A net pension asset results from an overfunded pension plan. A credit analyst should include a debt guarantee of the company that is making the guarantee.
